The Natural History Museum, Tring, Herts HP23 6AP, UK

ISBN 0907446 23 X

253 pages (Hardback)

32 pages of colour photographs

£35

This monograph is an analysis of the breeding and migrant avifauna of the three Cayman Islands since the first ornithologists visited in 1886. It describes status, distribution, and habitats of all 222 species, and breeding data for 49 species. It aims to place the Cayman Islands' avifauna in its historic and modern biogeographical context in the western Caribbean and to contribute to the database on Neotropical migrants, presently 79% of the Islands' avifauna.

## BIOLOGY OF MARINE BIRDS

EDITED BY E. A. SCHREIBER AND J. BURGER

CRC Press  
700 pages  
ISBN: 0849398827

Biology of Marine Birds, with 19 chapters written by well known authorities, provides the first comprehensive summary of information about marine birds. It summarizes and analyzes information on their breeding biology, ecology, taxonomy, demography, evolution, fossil history, physiology, energetics, and conservation. Four orders of marine birds are covered in detail: (1) penguins (Sphenisciformes), (2) albatross, shearwaters, petrels (Procellariiformes), (3) pelicans, boobies, frigatebirds, tropicbirds, cormorants (Pelecaniformes), and (4) gulls, terns, guillemots (Charadriiformes; Families Laridae and Alcidae). Two summary chapters address the biology of shorebirds and wading birds and their lives in the marine environment. It is a very comprehensive book and numerous summary tables present detailed information on various aspects of seabird life histories, breeding biology, physiology and energetics, and demography. There are extensive references at the end of each chapter. Three chapters dealing with conservation issues will be very useful for land managers.
